IPL (INTENSE PULSED LIGHT)

Powerful pulses of light are delivered into the skin and absorbed by melanin or pigment cells. IPL can safely be used to treat age spots, sun damage, and mild rosacea; redness on the face, neck, chest, and hands. Mild swelling and redness usually occur after the procedure but generally fade in 1-2 days.

LASER HAIR REMOVAL

A safe and effective procedure emits light pulses into the hair follicles, which then convert into heat energy. The heat loosens existing hair and disables the cells responsible for growing new hair. This procedure is safe for all skin types and is ONLY effective on dark, coarse hair. Recommend 6-8 treatments at monthly intervals for maximum improvement.
